

Your final group work

Let's recall

Sanitation Safety Planning - SSP

WHO recommended approach for local **health** risk **assessment and management** for sanitation systems

- Step-by-step **risk-based approach**
- Assists in the implementation of **local level risk assessment and management**
- **For the entire sanitation service chain** - from toilet, containment/storage and treatment, conveyance, treatment and end use or disposal

SANITATION SAFETY PLANNING

Step-by-step risk management for safely managed sanitation systems

Second Edition

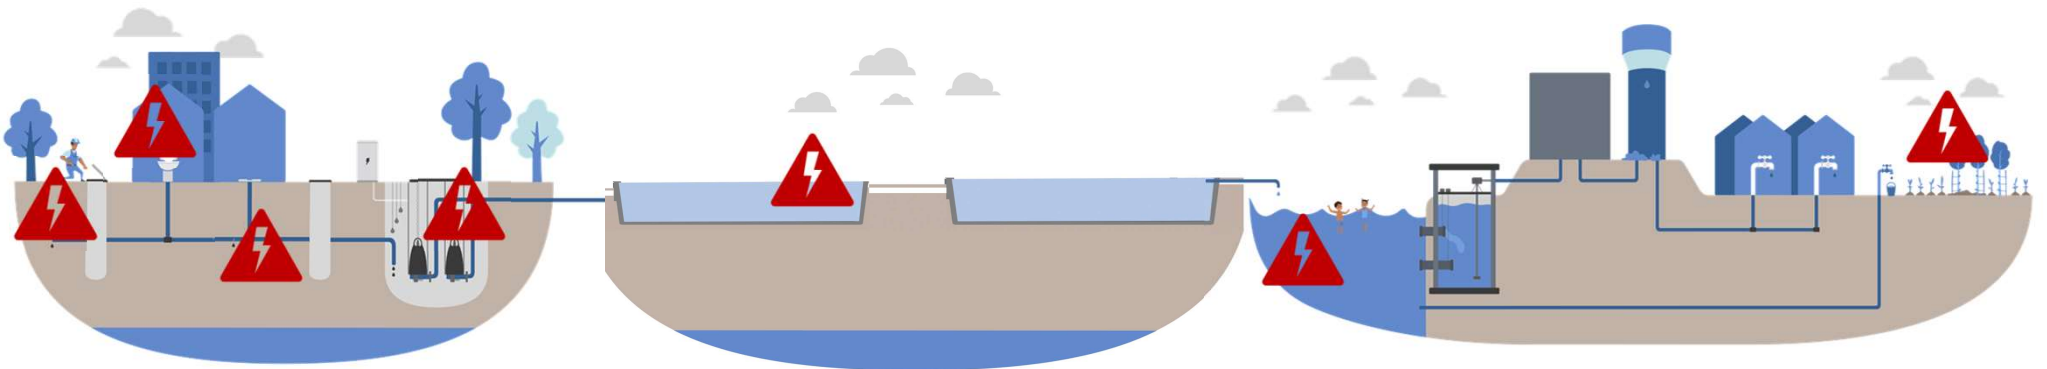

SSP ensures that the system is managed to meet the health objectives

How does SSP work?

Risk assessment and management tool:

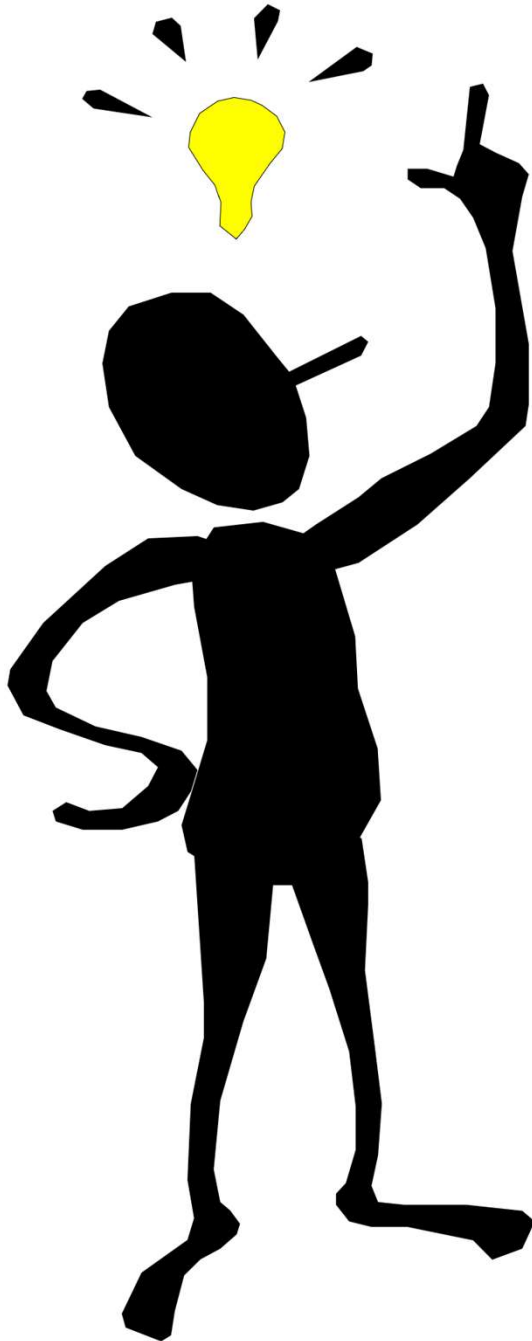

- Map and describe the **sanitation system**
- Identify the affected people or **exposure groups** (users, workers, communities, farmers, consumers)
- understand **transmission pathways** of excreta-related infections
- identify what could go wrong (**hazardous events**), evaluate the risk
- prioritize **highest health risk**
- Implement and monitor **control measures** to avoid exposure

Think: in the framework of
your day-to-day work

In which situations
SSP could be
implemented?

Ideas!

- In new and existing sanitation projects to identify investment needs.
- In a municipality which has large % of people not connected to the sewer.
- In urban areas in which the fate of faecal sludge management is un-known.
- In a centralized sanitation systems, where the reuse of treated effluent by farmers is not monitored.
- In areas in which enteric diseases are known.
- In highly populated areas using on-site sanitation.

Your final group work

1

Identify a SSP project idea

- Brainstorm within your groups: in which project, location, area, topic, could we implement an SSP?

Group 1: Jakarta

Group 2: Yogyakarta

Group 3: Surakarta

Group 4: Bekasi

Group 5: National level

2

Define your key stakeholder (target audience)

National authorities

Communicating is as important as the project idea!

State authorities

Regulator

Other agencies

Local authority

Utility

Where to start?

Choose your target(s) audience(s) for your next steps!

- Their interest
- Their capacity
- Their importance
- Willingness to collaborate

Your capacity to influence

←→
Your relationship

Your organization

- Your mandate/ your mission
- Your human resources
- Financial resources
- Your skills and capacities

Select entry points!

**What better way to understand your
target audience...**

... than putting yourself in their shoes?

3

Prepare a 5 minutes pitch

How do we communicate about SSP to our target audiences?

Who is our target audience?

What do we want them to do?

Message

Introduction (golden window):

Problem/Need/Interest:

SSP as a solution:

Benefits:

**How to get in action
(what do you need from them):**

4

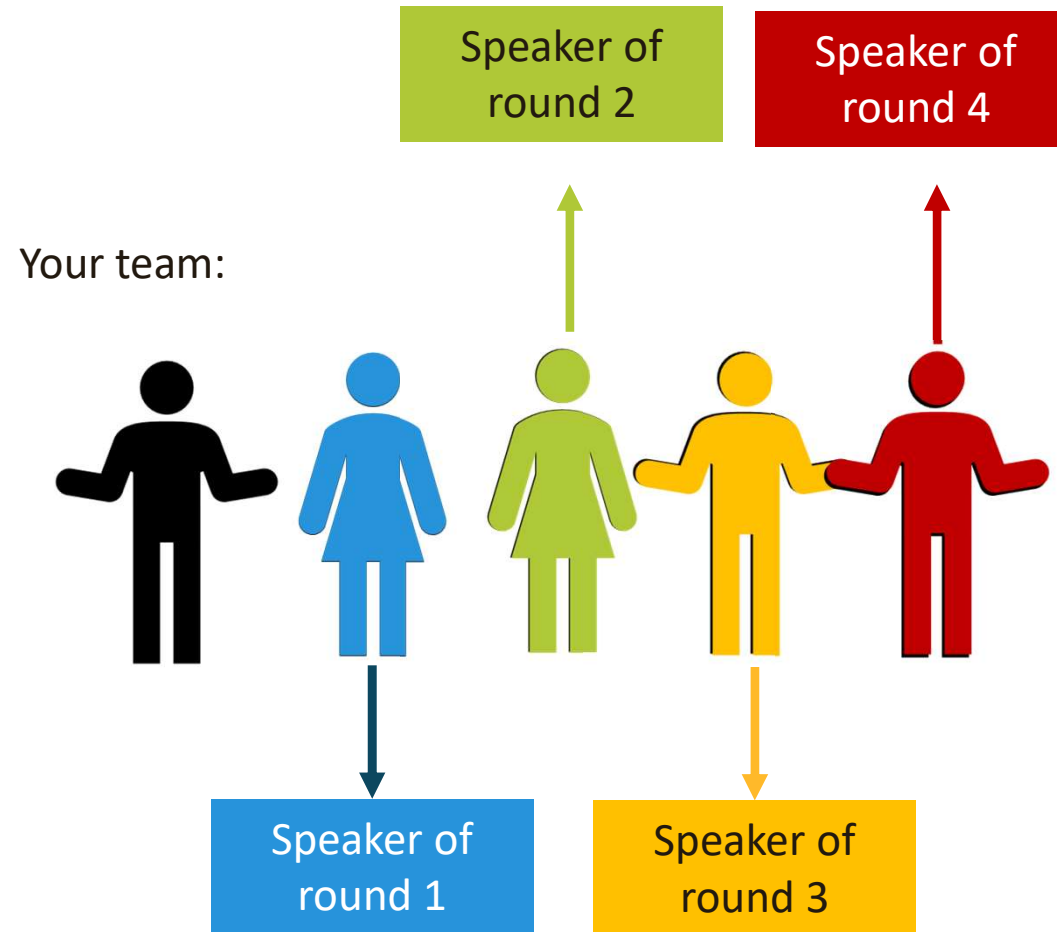

**Prepare a flipchart
with key information
to support your pitch**

5

Choose 3 speakers

- We will have 4 rounds of marketplace of 10 min each.
- Each round, one member of the team must stay at the stand (booth) and presents the SSP project idea.
- The rest of the team can go to others' booth and interact with other participants.

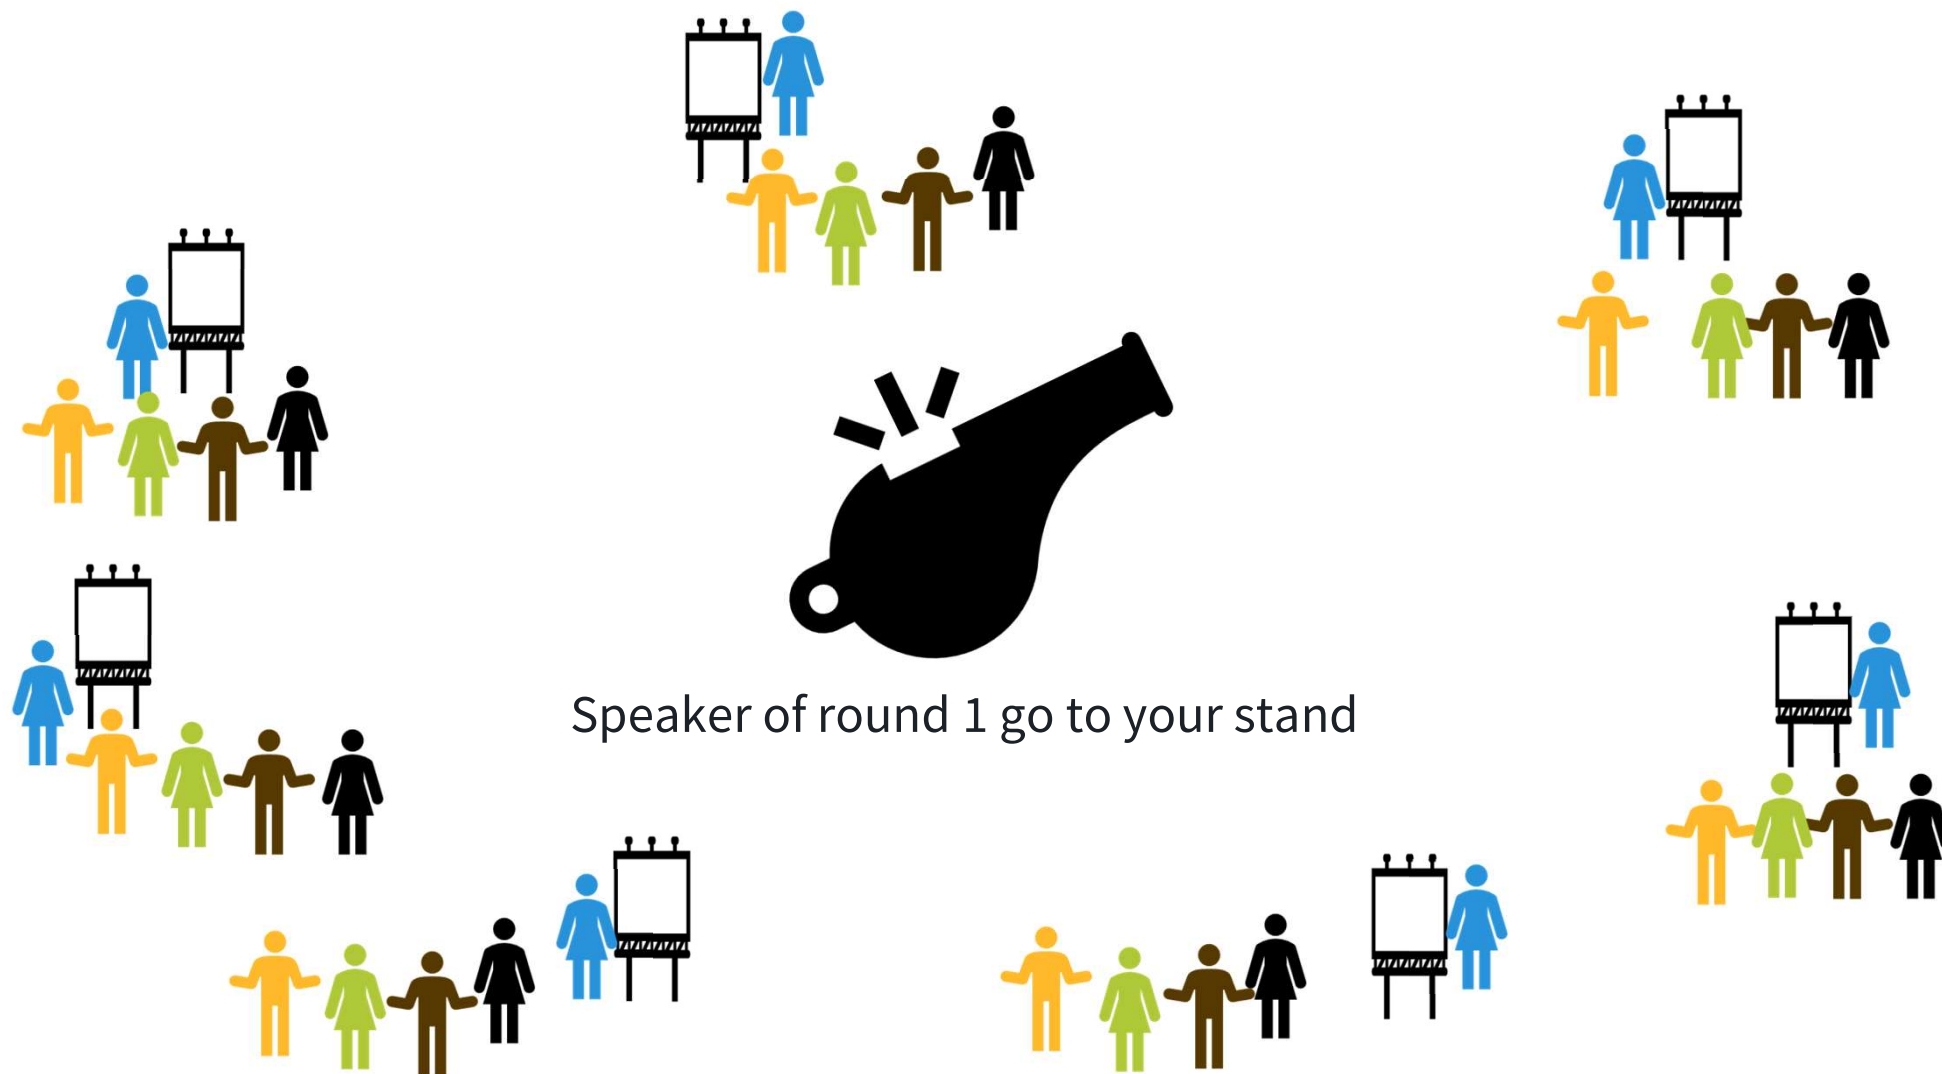

Everyone will have 1 SSP coin

6

Marketplace

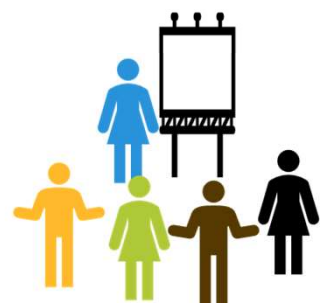

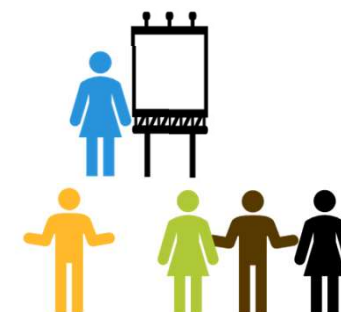

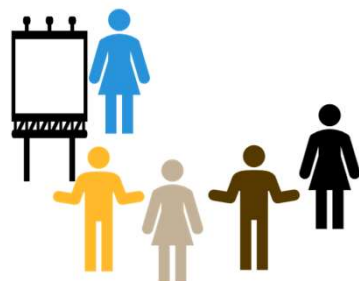

FIRST ROUND

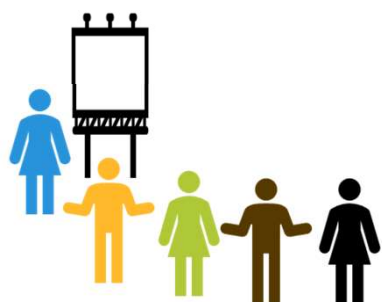

6

Marketplace

FIRST ROUND

15 minutes to present your SSP
idea to other participants

Rest of participants can freely visit
other stands

6

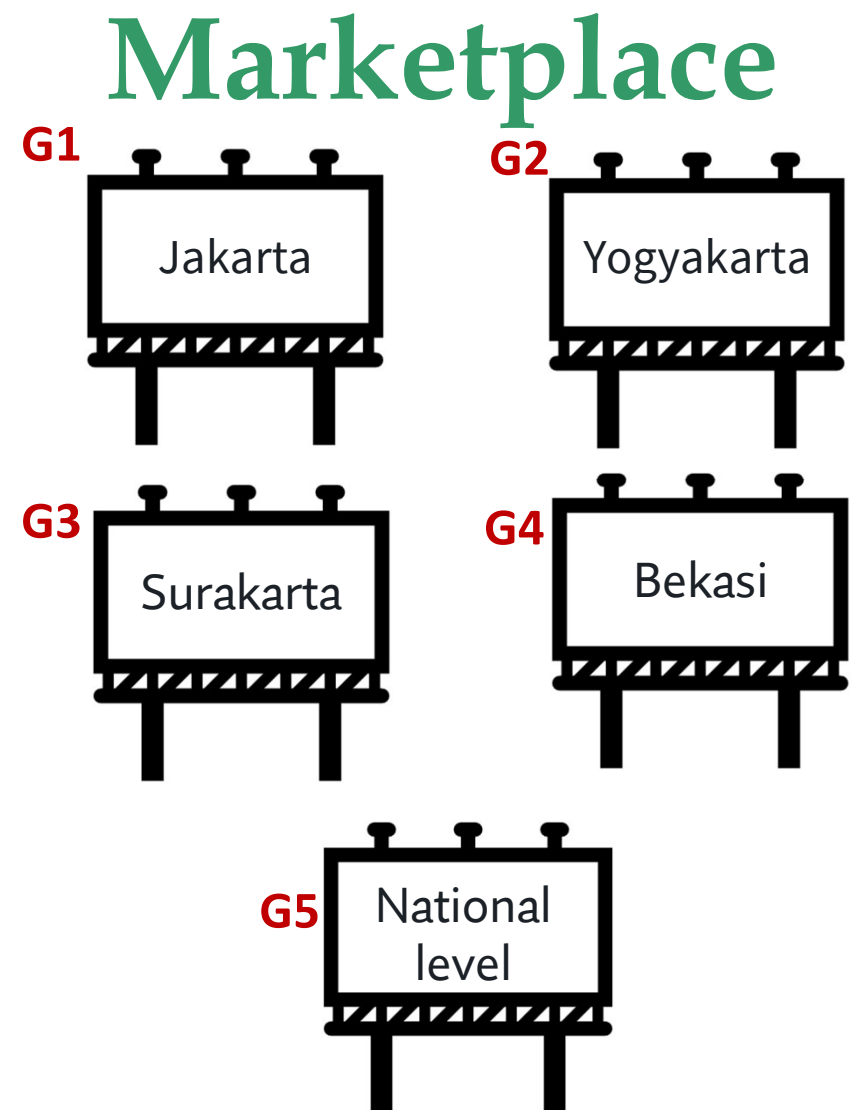

Marketplace

1. Identify a SSP project idea.
2. Decide who is your target audience.
3. Prepare a 5 minutes pitch to engage the target audience.
4. Prepare a flipchart with key information about SSP and benefits for the selected target audience. This will be your stand.
5. Choose 3 speakers: 1 for each round.
6. We will start the marketplace at 8:00am. Each one of you will receive 1 SSP coin. One of your team stays at your booth, and the other goes around the other booths. The one who stays pitches and “engages” other participants. We repeat 3 times.
7. Each participant should give the SSP coin to the booth (s)he likes the best.
8. The group with more coins wins a SSP prize.

And the winner is...

SANITATION SAFETY PLANNING

Learning Hub

Welcome to the Sanitation Safety Planning Learning Hub!

Sanitation Safety Planning, or SSP, for short, is a step-by-step risk-based approach for local level risk assessment and management for the sanitation service chain – including toilet, containment/storage and treatment, conveyance, treatment and end use or disposal.

SSP requires capacities from a range of stakeholders to initiate, develop, implement, monitor and sustain the process to safely manage

Reflection for way forward

In your tables by regions (**Jakarta, Surakarta, Bekasi, Yogyakarta** and **National Authorities**) discuss:

- What is the **benefit** that we perceive of SSP?
- **-How can SSP be integrated to our provincial/national initiatives?**
- **- What will be our next steps?**

5 min to share in plenary.

Let's see what
you NOW know
about SSP
